phonondb
total energy per atom
formation energy per atom
band gap
total magnetization
spacegroup number
energy above hull
dos at fermi
band gap direct
phase separation energy
max residual force
volume per atom
structure prototype
density
max residual stress
magnetization per atom
dimensionality
decomposition energy
largest cavity diameter
pore limiting diameter
void fraction
surface area gravimetric
co2 uptake
pore volume
n2 uptake
co2 n2 selectivity
working capacity vacuum swing
working capacity temperature swing
co2 heat of adsorption
n2 heat of adsorption
is gap direct
measurement temperature
experimentally observed
dielectric constant electronic
fermi energy
structures carrying the value
